

FOR IMMEDIATE RELEASE

AIDAR's LMS platform is using 5G to revolutionise the traditional training market

August 12th, 2021, Florida, USA – Nonvoice is pleased to announce today that they have entered into a representation agreement with AIDAR. The world's first 5G app agency welcomes the AIDAR platform to its Enterprise offering with their innovative solution that provides employee training support using the new technologies of augmented reality (AR) and virtual reality (VR).

The AIDAR platform enables companies to build their training and knowledge program in virtual and augmented reality including creating courses, taking tests as well as developing whole training stations that fully replicate the physical work environment. Customers who use the platform can measure a team's performance in the 3D environment utilizing a range of easy-to-use 3D tutorials. They can even send parts of technical documentation straight to staff on their AR glasses or mobile phone.

"We designed our platform to be fully equipped with whatever functionality a customer needs such as voice, video communication, augmented interactions like a whiteboard and 3D scanning etc. Our aim was to bring the long-established training market into the 21st century and beyond by utilizing 5G technologies. Our service is also easy for companies to transition to and start using from day one," explains Aidar CTO, Marek Carbon.

Nonvoice has seen an upsurge in video specific applications over the last few months. "Video is definitely an area where developers are capitalizing on the new possibilities made available with 5G including removing the latency issues of 4G stopped are helping this medium achieve its full. With 5G the skies the limit and we look forward to seeing more emerging video technologies such as this innovative solution from AIDAR coming onto the market," added Nonvoice CEO and Founder, Simon Buckingham.

Just some of the ways that Aidar is currently working with customers is to create a Digital Twin of their current training station. This means that all tangible production processes (procedures, duties

and activities of employees) are transferred into a virtual reality space. Building an error database can be then created using Artificial Intelligence for quality assurance and feedback. This platform has only just scratched the surface of what is possible. Employee training will never be the same again.
