

Nonvoice app developers ready for Nreal market with proven popular apps

May 6th 2021, Florida, USA – Nonvoice, the world’s first agency for 5G apps, is positioned to help telecommunications companies to source suitable content that can be used on the Nreal Light Augmented Reality (AR) glasses by providing access to best in class apps that have a proven track record and are popular with consumers.

Currently, the market for Nreal apps is just emerging as the device has only been released recently in some markets but mobile operators and Nreal need content sell devices. If each telco develops their own content this is costly and time consuming and Nreal’s focus is on delivering its AR glasses.

“The Nonvoice Agency is in a unique position to help operators and the emerging ecosystem to achieve success. If there is no suitable content creating long-lasting customer value, then there will be no take-up by consumers. This content also has to be developed with an understanding of the specific requirements of a head-mounted display,” explains Thomas Vits, Nonvoice Agent and AR expert.

With best in class augmented reality apps and developers with a deep understanding of the AR technology at its disposal, Nonvoice is well positioned to offer an independent structure to facilitate the development and acceleration of content for Nreal and other similar glasses. These apps are available and ready for operators to launch on their platforms. Just some of the apps available already through Nonvoice include the Active Augmented Reality Games from forwARdgame and the popular Bookful and Leo AR education apps, as well as many others.

Simon Buckingham, Founder and CEO of Nonvoice predicted in January that 2021 would be the year for AR and Mixed Reality apps. The interest in Nreal opens up another opportunity for AR apps to dominate and not only become successful in their own right but help guarantee the success of other technologies.

About Nonvoice Agency

Nonvoice Agency is a network of agents searching for the best advanced consumer and enterprise 5G apps from around the world. The agency connects app developers with distributors and investors who then help accelerate the adoption and deployment of their application. Nonvoice Agency provides an ecosystem of key parties dedicated to the 5G value chain and the future benefits that these services will bring to the world.

Founder, Simon Buckingham, is available for expert commentary on 5G applications.
